

- 1: Check the schedule to update the availability of the nodes (every 60 s)
- 2: Check the user reservation does not conflict with the existing reservations in the schedule. Set the user nodes in the configuring state.
- 3: After writing the deployment properties, the nodes are in the ready state.
- 4: Look repeatedly for nodes ready to deploy (max. every 3 s)
- 5: Look repeatedly for actions to execute (max. every 3 s). After the execution of the action, the state of the action is updated.
